Trusted Culture Media

for Veterinary Microbiology

Veterinary microbiology underpins animal health, disease prevention, and food safety. **AnalytiChem** supplies ready-to-use culture media under the Redipor brand for the detection, isolation, and identification of veterinary pathogens across companion animals, livestock, poultry, aquaculture, and veterinary healthcare environments.

Applications include:

- ▶ Routine veterinary diagnostic testing
- ▶ Detection and isolation of bacterial and fungal pathogens
- ▶ Media that supports antimicrobial susceptibility testing (AST) workflows
- ▶ Environmental monitoring in veterinary facilities
- ▶ Quality control in animal health laboratories
- ▶ Disease surveillance in food-producing animals

The range spans selective, differential, and chromogenic media that support the isolation, differentiation, and rapid presumptive identification of pathogens across these settings: *staphylococci* and *streptococci* in companion-animal and bovine mastitis diagnostics, where *Staphylococcus pseudintermedius*, including meticillin-resistant strains, is an increasing concern; *Salmonella* and *Campylobacter* in poultry surveillance, following ISO 6579-1 and ISO 10272-1; and *Aeromonas*, *Vibrio*, and *Yersinia* in aquaculture. It also covers environmental monitoring, including contact and settle plates, and antimicrobial resistance surveillance for organisms such as MRSA, MRSP, and ESBL-producing Enterobacterales. Every batch is manufactured and performance-tested within a certified quality-management system, giving consistent, traceable, and reproducible results.

AnalytiChem has partnered with  **NZYtech**, a leading biotechnology company specializing in molecular biology and diagnostic solutions for veterinary applications. Through our partnership, veterinary laboratories across Europe have access to high-performance molecular diagnostic kits, reagents and workflows designed to support the rapid, accurate detection of animal diseases.

Applications

- ▶ Veterinary Diagnostics
- ▶ Molecular Diagnostics
- ▶ Pathogen Detection
- ▶ qPCR & RT-qPCR
- ▶ Animal Health
- ▶ Veterinary Laboratories
