

## **Spectral Blue appoints AnalytiChem as international distributor expanding the access to chemical-free contamination control technology that helps protect patients, consumers and product quality**

The companies have signed a distribution agreement that expands international access to automated and continuous contamination control solutions based on antimicrobial blue light.

Salo, Finland, 5 February 2026 — Spectral Blue, an innovative developer of next-generation disinfection technology, today announced a new distribution partnership with AnalytiChem, a leading provider of high-quality analytical and diagnostic solutions. The agreement will enable the distribution of Spectral Blue's solutions to a broader international customer base, strengthening access to chemical-free, UV-free, safe, and sustainable contamination control solution across key scientific and industrial markets.

Under the partnership, AnalytiChem will leverage its established sales network and technical expertise to support sales, customer service, and application guidance for Spectral Blue's solutions. The collaboration is designed to help customers in pharma, food & beverage, and laboratory segments to more easily adopt the new technology in their facilities.

*Nico van Stallen*, Segment Director Life Science & Lab Essentials at AnalytiChem commented:

"Partnering with Spectral Blue fits seamlessly with our commitment to deliver innovative, high-performance solutions to scientific and industrial customers. With our deep expertise in environmental monitoring and contamination control workflows, combined with our strong international reach, we are uniquely positioned to bring Spectral Blue's advanced technology to a wider audience. This collaboration empowers customers to automate contamination control, reduce dependence on chemicals, and achieve both improved hygiene conditions and more sustainable operations."

*Dr. Michel Schmidt*, CEO of Spectral Blue, commented:

"We are excited to partner with AnalytiChem, a company that shares our commitment to scientific excellence and customer focus. This distribution agreement allows us to accelerate the adoption of our blue light solutions and ensures that customers benefit from strong local support and deep application expertise."

The partnership reflects both companies' shared focus on innovation, quality, and long-term customer success. Customers can expect seamless access to Spectral Blue's technologies, backed by AnalytiChem's comprehensive sales and support infrastructure.

### **About Spectral Blue**

Spectral Blue / LED Tailor Oy is a Finnish life-science company specializing in the development and manufacture of chemical-free disinfection solutions based on antimicrobial blue light (aBL). Our solutions contribute to better surface hygiene and air quality in cleanrooms, food industry, laboratories, healthcare facilities, and sites with indoor air quality issues.

**About AnalytiChem**

Formed through the acquisition and integration of companies with expertise in specialized laboratory applications, AnalytiChem brings together decades of manufacturing experience and complementary product technologies.

Today, AnalytiChem focuses on supporting laboratories around the world with its portfolio of specialized laboratory equipment, reagents, and consumables. The company's products are designed to enable customers to make better measurements in analytical chemistry and microbiology. AnalytiChem creates the highest-quality culture media, reference materials for inorganic and organic analysis, laboratory consumables, and sample preparation equipment that support the measurements that matter in everyday life.

AnalytiChem is a global company, with manufacturing, distribution, sales, and support centers across Europe, United Kingdom, North America, and Australia.
